		Interaction Report	
Report ID: Date Produced:	03 May 2025		
Hepatology Treatment		Co-medications	
Bulevirtide		Lopinavir	

This report lists the summaries of potential interactions (i.e. "red", "amber" and "yellow" classifications) for the drugs in the table above.

Interactions with a "green" or "grey" classification (i.e. no clinically significant interaction or no clear data) have been checked and are listed at the end of this report, but summaries are not shown. Please note that some co-medications with a green classification may require dose adjustment due to hepatic impairment.

For full details of all interactions, see www.hepatology-druginteractions.org .

Description of the interactions

Drugs that should not be coadministered (RED)

Bulevirtide + Lopinavir

Bulevirtide is catabolized by peptidases and elimination occurs through binding to NTCP. Coadministration with NTCP inhibitors (e.g. ritonavir, given with lopinavir) is not recommended as it may alter bulevirtide elimination.
